

Download Helper

The Download Helper lets you download data to your desktop.

Loading this Helper

This helper is loaded using the following code:

```
rigLoadHelper "download"
```

The following handlers are available:

rigForceDownload "filename", "data"

Generates server headers which force data to be downloaded to your desktop. Useful with file downloads. The first parameter is the **name you want the downloaded file to be named**, the second parameter is the file data.

Example:

```
put "Here is some text!" into tData
put "mytext.txt" into tName

rigForceDownload tName, tData
```

If you want to download an existing file from your server you'll need to read the file into a string:

```
put rigFile_get_contents("/path/to/photo.jpg") into tData -
- Read the file's contents
put "myphoto.jpg" into tName

rigForceDownload tName, tData
```
