

XML Helper

The XML Helper file contains handlers that assist in working with XML data.

Loading this Helper

This helper is loaded using the following code:

```
rigLoadHelper "xml"
```

The following handlers are available:

rigXmlConvert("string")

Takes a string as input and converts the following reserved XML characters to entities:

Ampersands: &

Less than and greater than characters: < >

Single and double quotes: ' "

Dashes: –

This function ignores ampersands if they are part of existing character entities. Example:

```
put rigXmlConvert(tString) into tString
```
